

Security Center

Website Security Platform

eCyLabs Security Center is a cloud based security platform that makes easy-to-use tools for analyzing security threats for your websites as an outsider. Find known and unknown attack vectors that include bad bots, malware infections, instructions, dark web analysis and other security threats that are associated with your web applications.

5-STEP Approach

eCyLabs Security Center built based on the 5-Step Approach from NIST Cybersecurity Framework to ensure Website Security. With this one can **Identify, Protect, Detect, Respond and Recover** security threats that are specific to business critical applications.

Platform Quick Look

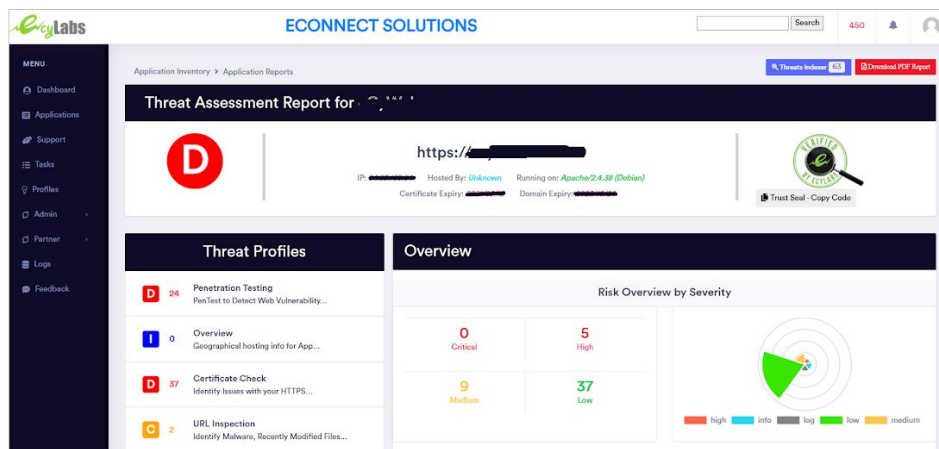

Org-wide Dashboard

OnBoard multiple applications, view organization wide score and overview of security risk across all the applications and chart showing the relative health (on a scale of A to E) of the website/application.

Application Inventory

Auto Discovery of Application Assets, URL Inventory and other public assets associated with application and its availability status.

Assessment Report

Threat Assessment Report provides a security grade for the website based on its status, along with a summary of the profiles and list of issues.

And many more features

Website Threat Management

Security Marketplace approach helps to choose required threat profiles to gain insights on the security threats that are associated with applications. We are often releasing new Threat profiles, with this you can mix and match, apps and profiles to automate threat detection. Our **Threat Response Center** allows you to address key security challenges in a shorter time.

How it Works

Threat Detection Profiles

- ★ Blacklist checker provides an easy way to provide insights on where it's black listed against **126 blacklist databases**.
- ★ URL Inspection service built to identify unsafe websites, **Malware Infections** and provide disclosure about the threats. Checks all the web links and marks them to indicate the degree of danger.
- ★ We discover possible web attacks against **OWASP Top 10 security concerns** including awareness document for Web application security.
- ★ Bringing the best **SSL/TLS and PKI testing** to ensure the website is safe and secure.

Upcoming Profiles

- ★ Profile for **API Security** to understand and mitigate security risks of Application Programming Interfaces (APIs).
- ★ **CIS Security Benchmark** test for AWS EC2 Instances to help assess and improve server security.
- ★ Basic Security Check Profile to find common **website misconfigurations** such as CMS, DNS, SPF, DKIM and much more.
- ★ Accessibility compliance check against **WCAG, Section 508** and Broken Links.
